SUMMARY

Computer Science graduate with experience in application development, technical support, hardware/software troubleshooting, and database systems. I know how to use Python, Java, Kotlin, JavaScript, PHP, MySQL, SQLite, RESTful API concepts, Windows/Linux OS, and user support and most of MS applications. Built management application and administrative systems. Recently added AI tools to my development workflow, using them to speed up coding and debugging.

SKILLS

- **Frontend:** React, Next.js, TypeScript, JavaScript, HTML/CSS, Tailwind CSS, Framer Motion, Electron.
- **Backend and APIs:** Node.js, Django, FastAPI, PHP, Python, REST APIs, WebSockets/SSE, Electron.
- **Mobile and Desktop:** Android (Kotlin, Java, Jetpack Compose, Room, MVVM, CameraX, Google ML Kit).
- **Databases:** SQL, PostgreSQL, MySQL, SQLite, Cloud Firestore.
- **Testing:** Vitest, Jest, custom Node.js UI automation scripts.
- **Tools and Practices:** Git/GitHub, Agile/Scrum, Android Studio, Gradle, AI-assisted development (Claude, Gemini, Copilot, Cline), local LLM integration.
- **Cloud and Automation:** Cloudflare Workers, AWS, Zapier, n8n, Google Workspace.
- **IT Support:** Windows and Linux deployment and configuration, hardware troubleshooting and repair, PC assembly, LAN diagnostics, Active Directory, issue tracking, documentation.

PROJECTS

Mobile POS and Inventory System **GitHub**
Kotlin, Java, SQLite, XML, CameraX, Google ML Kit, MPAndroidChart, iText

- Built and released an Android POS and inventory system for small retail stores.
- Implemented barcode checkout, inventory tracking, and transaction management using CameraX and Google ML Kit.
- Added sales analytics, sales forecasting, and restock recommendations with MPAndroidChart, plus PDF receipt generation.

Personal Dashboard
FastAPI, Uvicorn, SQLite, APScheduler, OpenAI Python SDK, HTML, CSS, JavaScript **GitHub**

- Built a personal dashboard with widgets for free games, deals, news, weather, a daily digest, wishlist, and AI chat.
- Integrated six external APIs (GamerPower, Epic Games, CheapShark, Hacker News, GitHub, Open-Meteo) with SQLite caching and scheduled background refreshes.
- Added configurable LLM support with per-browser provider settings, a connection test endpoint, and a customizable settings UI covering theme, accessibility, and widget visibility.

Quiz Environment (Android and Desktop) **GitHub**
Electron, React, TypeScript, Node.js, WebSockets, SQLite, local AI (GGUF/llama.cpp), Android

- Built an offline classroom quiz system where an Electron instructor app hosts a local WebSocket server and Android students join via QR code or 4-digit PIN.
- Implemented exam-integrity and reliability features including Android Lock Task Mode, WebSocket telemetry, heartbeat tracking, device identity recovery, and local answer persistence.
- Supported 8 quiz question types with randomization and server-side validation, plus offline AI question generation from lesson material using local GGUF/llama.cpp models.

EXPERIENCE

Freelance Developer 01/2023 - Present
Self employed *Remote*

- Rebuilt frontend components for a legacy School System and 2 barangay management systems across Mindanao, replacing outdated code with modern frameworks and techniques.
- Addressed recurring portal downtime and slow load times, resulting in noticeably faster performance and more stable, reliable uptime post-rebuild.
- Contributed to backend database integration by defining object and function naming conventions for REST API POST and GET endpoints to support frontend-database flow.
- Assisted in migrating legacy functions, methods, and UI designs from non-framework code into Node.js, React, Next.js and Django-based systems, ensuring existing functionality carried over correctly during the framework transition.
- Collaborated with fellow freelancers and system stakeholders to scope requirements and prioritize fixes across the school system and 2 barangay systems.

Intern 07/2025 - 08/2025
Drainwiz Computer System *Echavez Street, Dipolog City, Zamboanga del Norte, Philippines*

- Collaborated with senior software engineers on a client web application build, fixing bugs and implementing database connections using HTML, CSS, JavaScript, and PHP to help bring the project to completion.
- Diagnosed and resolved hardware and software issues across company computers Windows and Linux, including OS installation, printer, and network equipment troubleshooting for client and internal systems.
- Worked alongside a two-person senior engineering team under close mentorship, gaining hands-on experience in real client-facing web development while balancing IT support responsibilities.

Help Desk Technician 03/2022 - 05/2022
Virtual Buddy *MSE Building, Barangay Minaog, Dipolog City, Zamboanga del Norte, Philippines*

- Provided technical and application support for customers and employees in a fast-paced call center environment, troubleshooting hardware, software, and system issues.
- Guided users step by step through issue resolution, communicating clearly with both technical and non-technical staff.
- Logged and tracked reported issues for technician follow-up and escalation, maintaining accurate records for documentation.

EDUCATION

Bachelor of Science in Computer Science 08/2022 - 05/2026
Andres Bonifacio College *College Park, Dipolog City, Zamboanga del Norte, Philippines*

- **Relevant Coursework:** Software Engineering, Object-Oriented Programming, Data Structures & Algorithms, Database Systems, Computer Networks, Web Engineering, Artificial Intelligence, Information Security.
